### Confirmatory factor analysis of the Arabic version of the ICIQ-LTCqol

The following supplementary materials provide further detail on the Confirmatory factor analysis conducted on the Arabic version of the ICIQ-LTCqol.

Endogenous variables were q4a q5a q6a q7a q8a q9a q10a q11a q12a q13 q14 q15

Exogenous latent variables were ‘function’ and ‘lifestyle’ domains.

The CFA was fitted via a structural equation model using a maximum likelihood estimation method on the standardized endogenous variables. N=141
